

ProV+

Zinwell ProV+ turns any computer monitor into a true multimedia center by merging your computer with a wide variety of external video and audio devices. ProV+ takes external video and audio from a Laser Disk, DVD Player, VCR, Camcorder, Video Game, Satellite Receiver, or virtually any other video source to display on any VGA Monitor or LCD Monitor. With a built-in TV Tuner, ProV+ also allows you to watch Broadcast or Cable TV on monitors without adding any software or hardware to the computer. It even connects the audio to your computer speakers!

Zinwell ProV+ is a high performance device with frame buffer technology, which can significantly increase the quality of images by doubling the standard video lines. Adding ProV+, lets you have 480p line resolutions at 31.5 KHz on your VGA Monitor or LCD Monitor which can increase the image brightness and decrease the flicker rate.

Features

- With advanced video processing technology, the TV, Composite Video, S-Video signal can be displayed on PC monitors, or any device with VGA input.
- Crispy and flicker free picture by Progressive Scan with frame rate converters
- Teletext Decoder, with Fastext.
